

Economic and Social Council

Distr.: General
16 September 2015

Original: English

2015 session

21 July 2014-22 July 2015

High-level segment

Summary record of the 47th meeting (Chamber A)

Held at Headquarters, New York, on Thursday, 9 July, at 3 p.m.

President: Mr. Khiari (Vice-President) (Tunisia)

Contents

General debate (*continued*)

This record is subject to correction.

Corrections should be submitted in one of the working languages. They should be set forth in a memorandum and also incorporated in a copy of the record. They should be sent as soon as possible to the Chief of the Documents Control Unit (srcorrections@un.org).

Corrected records will be reissued electronically on the Official Document System of the United Nations (<http://documents.un.org/>).

In the absence of Mr. Sajdik (Austria), Mr. Khiari (Tunisia), Vice-President, took the Chair.

The meeting was called to order at 3.10 p.m.

General debate (continued)

1. **Mr. Shin** Dong-ik (Republic of Korea) applauded the international community's ambitious response to the unfinished business of the Millennium Development Goals (MDGs). The post-2015 development agenda should be universal, inclusive, transformative, people-centred and planet-sensitive, while taking into account different national circumstances, capacities and priorities. Establishing enabling environments and sound policies and institutions at the country level would be crucial to its success. His country attached particular importance to human rights, gender equality, the protection of vulnerable and marginalized groups, education, health, rural development and inclusive economic growth, good governance and the teaching of tolerance, respect and understanding. The third International Conference on Financing for Development should define a comprehensive framework for both financial and non-financial means of implementation of the agenda.

2. It was critical to establish a universal, robust and inclusive follow-up and review framework ensuring the equal participation of all stakeholders at the national, regional and global levels. To create synergies and avoid duplication, that framework should incorporate existing mechanisms such as the Global Partnership for Effective Development and Cooperation. The high-level political forum on sustainable development should be the global focal point for overall follow-up and review. The review process should cover the means of implementation of the goals and the quality of development cooperation. It should be based on the key principles of national ownership, focus on results, inclusive partnership, transparency and mutual accountability. In that connection, good indicators and collectible, reliable, comparable and timely data would be extremely important.

3. As the principal United Nations body for coordination, policy review and policy dialogue, the Council should play a significant role in integrating the economic, social and environment dimensions of sustainable development. His country fully supported the Council's dialogues on the longer term positioning of the United Nations development system.

4. **Mr. Mvunga** (Observer for Zambia) said that, thanks to its development plans premised on promoting sound macroeconomic management, Zambia had experienced steady economic growth over the preceding decade. Although the severe nature of some of its austerity measures had hindered the full attainment of some MDG targets, those measures had created a sound economic basis for future development. Zambia had, for example, made strong progress in education and HIV/AIDS prevention.

5. The post-2015 development agenda would be the focus of its national development plan 2017-2021. It had already developed a national planning and budgeting policy with a view to harmonizing government action across sectors, ensuring broad grassroots participation in the planning process and enhancing the implementation, monitoring and evaluation of sustainable development programmes. Its domestication of the sustainable development goals would be based on engagement of all stakeholders, recognition that the goals were universally applicable and promotion of partnerships. In addition, it was working with the United Nations to develop the next United Nations Partnership for Development Framework in Zambia.

6. **Mr. Oporto** (Argentina), noting the importance of robust and transparent follow-up mechanisms, said that monitoring and review of the post-2015 development agenda should be entrusted to the high-level political forum on sustainable development, in coordination with regional forums and commissions. The follow-up mechanism should address all commitments and objectives, including those related to means of implementation. It should also keep reporting burdens to a minimum and make use of existing structures. National Governments should play a lead role in the review process, opening channels of participation for community and social organizations. Experience had shown that development could be achieved only through cooperation, solidarity and respect for national differences and each country's democratically chosen path to development.

7. Argentina applauded efforts by the United Nations and Member States to build partnerships for development with the private sector and civil society. While the State could not delegate responsibility for development and must be vigilant to the actions of a greedy minority in the private sector, it was essential to galvanize the participation of business and civil

society. However, public-private partnerships must comply fully with the mandates and objectives established by the United Nations development system, the development priorities of local agencies and the principles of national ownership and neutrality. With regard to financing, monitoring was vital to ensure follow-through on means of implementation. While private sector financing could play an important role, public financing should continue to be the mainstay of development funding. In respect of international cooperation for development, triangular cooperation remained an effective mechanism for more substantial and sustainable assistance.

8. In addition to playing a central role in the follow-up and review process, the high-level political forum should provide guidance, recommendations and political leadership and could serve as a useful mechanism for coordinating sustainable development efforts, promoting the exchange of best practices and improving the coherence of sustainable development policies. The institutional arrangements of the United Nations development system should be strengthened to allow it to address United Nations priorities more effectively in the context of local development agendas.

9. **Mr. Balisacan** (Observer for Philippines) said that the post-2015 development agenda must equitably balance the needs of the poor, marginalized and vulnerable with those of future generations. As a victim of typhoon Haiyan in 2013, his country reiterated the necessity of a revitalized global policy framework for disaster preparedness and response. It was pleased that the draft outcome document of the United Nations summit for the adoption of the post-2015 development agenda put people at the centre of sustainable development, incorporated the unfinished business of the MDGs and recognized the various challenges of the Member States.

10. The final document should be based on clear, measurable and identifiable indicators. It should promote investment in people and natural capital and build South-South cooperation. Furthermore, it should emphasize green growth, public-private partnerships, adequate financing, capacity-building, technology transfer, sustainable consumption and production, data availability and accountability for progress. Stronger global and regional partnerships would also be needed to support national efforts. The post-2015 development agenda and the outcome document of the United

Nations Conference on Sustainable Development should be consistent and mutually reinforcing, and the high-level political forum on sustainable development should be the primary mechanism for monitoring the implementation of the sustainable development goals.

11. **Mr. Golitsyn** (Observer for Ukraine) said that the post-2015 development agenda must build trust by emphasizing public participation, social accountability and transparent public access — all essential for a bottom-up, people-centred approach to development — and by aligning action plans with local community needs. It should also promote partnerships. Because conflicts such as the one in Ukraine had staggering consequences for human development, it was critical for the new agenda to fully reflect the assistance needs of affected countries.

12. **Mr. El-Nabulsi** (League of Arab States) said that the League remained committed to supporting sustainable development throughout the Arab region, despite the turbulence spawned by the Israeli occupation and the spread of terrorism in the region. By communicating regularly with regional organizations, taking stock of achievements and outlining challenges, the high-level political forum would reaffirm its role of providing follow-up, review and recommendations based on the unique circumstances of each Member State, including crises and natural disasters. The League of Arab States stood ready to participate in the follow-up and review process through its different development forums. It would continue its successful cooperation with the United Nations specialized agencies and was already holding meetings with the United Nations Development Programme to work out detailed plans based on developments in the region.

13. **Ms. Bogdan-Martin** (International Telecommunications Union) said that since the beginning of the millennium, almost half of the world's population had gone online. The final draft of the sustainable development goals recognized the enormous potential of information and communications technologies to accelerate human progress, making them an explicit part of goal 17 and incorporating them as a cross-cutting enabler. The success of any sustainable development strategy would hinge on how effectively it integrated a digital means of implementation and accountability. Harnessing the power of new technologies would require careful management of the complex issues of privacy and

security. The challenge for the United Nations would be to integrate the smart application of new technologies into the yearly assessments of the sustainable development goals. In that connection, the December high-level meeting of the General Assembly to review of the implementation of the outcomes of the World Summit on the Information Society would present an unprecedented opportunity to coordinate the post-2015 development and World Summit agendas.

14. **Mr. Kwain** (Deputy Director, Bureau for Policy and Programme Support, United Nations Development Programme (UNDP)) said that the international community faced a number of challenges in developing the post-2015 development agenda. The first was the integration imperative: the need to tackle a broad range of interconnected goals together. The second was the challenge of the last mile, which was as much political as technical or geographical, since it required eliminating root causes often deeply embedded in economic, social and political issues. The third was the need for risk-informed development, seriously examining and addressing the causes of volatility, crises and vulnerabilities. The fourth was the universality of the new agenda, which required stronger collective action and planning at the regional and global levels. The fifth was the need to build better knowledge through better metrics, better data and better analysis of options across the 17 goals.

15. UNDP had provided extensive support at the national level for the MDGs, and it had recently spearheaded the mainstreaming, acceleration and policy development strategy within the United Nations Development Group. Having offered technical advice for the definition of the new agenda, it was well placed to support the implementation of that agenda. The high-level political forum should play a key role in supporting open and participatory policymaking and bringing together different sectors of the United Nations system and national Governments, thereby increasing the engagement of all stakeholders.

16. **Mr. de Guimarães Pinto** (United Nations Educational, Scientific and Cultural Organization (UNESCO)) said that the new global agenda called for innovative financing; in other words, leveraging domestic and international sources of financing and capturing every opportunity for partnerships. It also required stronger South-South cooperation and far more emphasis on building capacity for public policymaking. The United Nations specialized agencies

would play a vital role by pushing upstream policy support, building capacity, leading high-quality data collection and analysis and providing a platform for multi-stakeholder engagement. The promotion of education, science and culture would be crucial in achieving the goals; in that connection, UNESCO would work with all partners to establish the indispensable technology facilitation mechanism which would be launched at the United Nations summit for the adoption of the post-2015 development agenda in order to support the sustainable development goals.

17. Achieving the sustainable development goals would require more robust national science, technology and innovation policies and significant investments in research and development, technical support and capacity-building. Across the agenda, it would be necessary to reinforce the capacities of all countries to collect reliable, disaggregated data and to ensure a high degree of transparency. Freedom of expression and, specifically, free, independent and pluralist media, would be vital to engage all stakeholders and ensure active citizen participation.

18. **Ms. Celik** (United Cities and Local Governments) speaking on behalf of the major group for local authorities, said that her organization was committed to achieving all of the 17 interrelated sustainable development goals. It was important to ensure multi-stakeholder involvement at the national, regional and local levels in order to harness the potential of the hundreds of thousands of local and regional governments with responsibility for implementing those goals. The high-level political forum, which should be a mechanism for transmitting knowledge between key constituencies, needed a more targeted agenda reflecting the interrelationships among the goals. Because the goals represented a new approach to development, they would require new forms of data, governance and policymaking.

19. Her organization commended the important contributions of the other major groups, which helped it to shape its own policies and positions, and hoped that the very significant coordination efforts of the major groups would be duly recognized in future sessions of the high-level political forum. It looked forward to seeing the sustainable development goals embedded in the new urban agenda to be shaped by the United Nations Conference on Housing and Sustainable Urban Development in 2016.

20. **Ms. Touré** (Action aide aux familles démunies) said that, despite their importance for development, women continued to be excluded in development policies and macroeconomic analyses. A number of trends demonstrated the importance of improving policies for empowering migrant African women in and outside Africa. The specific challenges of woman of African descent should be addressed in international development efforts, including the post-2015 development agenda and the International Decade for People of African Descent. She urged support for an inclusive and endogenous sustainable development model, respectful of the rights of women and involving all stakeholders, including women of African descent.

21. **Mr. Huffines** (CIVICUS: World Alliance for Citizen Participation), speaking on behalf of the major group for non-governmental organizations, said that CIVICUS stood ready to partner with all stakeholders to implement the post-2015 development agenda. It would work with Governments to craft national development plans and indicators suited to the unique circumstances of each country, emphasizing the needs of the marginalized and impoverished. At a two-day workshop in June, representatives of major groups and other stakeholders had discussed how non-State actors could participate in the work of the high-level political forum, including the monitoring and review mechanisms, and had looked at ways to strengthen the internal governance of the nine major groups and other stakeholders so as to ensure broad and balanced participation and promote openness, transparency and accountability.

22. To meet the welcome challenge of working towards interlinked goals, it would be necessary for non-governmental organizations to operate outside their traditional silos; to form alliances to work constructively with Governments and intergovernmental organizations; to partner with other stakeholders to build better connections between ground-level issues and global-level processes, and to nurture better South-South and North-South actions. In addition, a broader range of civil society organizations would need to be brought into global decision-making.

23. **Mr. Mistry** (Albert B. Sabin Vaccine Institute) said that neglected tropical diseases should receive priority attention in the new agenda. They perpetuated poverty by preventing children from attending schools and keeping parents from working, and they killed at least 400 thousand people a year. Being closely tied to

other development issues, they demonstrated the value of a cross-cutting approach. For example, they could exacerbate the effects of undernourishment; disproportionately affected women and girls; were often linked to contaminated water or poor sanitation or hygiene and thrived in countries with weak health systems. Investing in neglected tropical disease programmes would provide high returns by reaching the poor. The Sabin Vaccine Institute applauded the decision to include neglected tropical diseases in the proposed goals. However, it was imperative also to adopt an indicator for those diseases.

24. **Ms. Kenyangi** (Support for Women in Agriculture and Environment), speaking on behalf of the major group for women, said that the high-level political forum must be strong, independent, transparent and inclusive. Its role was to ensure policy coherence across Governments and the United Nations system, and across international financial and trade institutions. It should also ensure coherence with the financing-for-development process. Its monitoring mechanism should be integrated, transparent and universal. The global review process should build on regional and national review processes, and all countries should undergo comprehensive reviews. Moreover, reviews at all levels should ensure that non-State actors, including international financial institutions and transnational corporations, were held accountable for their development commitments and impacts. The forum should provide guidelines and assessments to ensure that private financing was fully aligned with human rights and sustainable development objectives. Lastly, a mechanism should be established to ensure robust involvement, funding and capacity-building for self-organized major groups.

25. **Mr. Daly** (CLIPSAS) said that the industrial revolution had significantly harmed the Earth's ecosystem. Technological change would probably not suffice to delay the end of the industrial era; moreover, it was ethically and morally wrong to expect humankind to survive in a socially and environmentally degraded world. Sustainable development sought to find a way out of the resulting social, economic and ecological crisis, but it was based on the false hope of reconciling capital accumulation, social justice and planet preservation. The only real solution was "sustainable de-growth"; in other words, slowing economic growth among the one fifth of the world's population that consumed four fifths of the

world's resources, in order to make it possible to speed up growth among the other four fifths.

26. **Mr. Cuk** (European Disability Forum), speaking on behalf of persons with disabilities, said that implementation of the sustainable development goals should be inclusive of persons with disabilities, who were overrepresented among the world's poor. National strategies and mechanisms for achieving the goals should address the development of support services for persons with disabilities and the removal of physical and informational barriers for such persons. They should build on and comply with internationally recognized standards and commitments, such as those set forth in the Convention on the Rights of Persons with Disabilities. Including disability standards from the outset was economically more efficient than revamping buildings or programmes later on. Moreover, respect for human rights could not be divorced from development.

27. **Mr. Theyer** (Fairtrade Labelling Organizations International) said that delivering the sustainable development goals required the voices of smallholder farmers and workers to be heard at the highest levels of Government and commerce. To ensure inclusive trade that benefited the poorest, the indicators should capture not only the impact of trade deals on projected gross domestic product but also their medium and long-term effect on the livelihoods of the poorest. Institutional reform and accountability would be necessary to ensure that bilateral, regional and multilateral trade agreements were fully aligned with poverty and sustainability goals. Furthermore, to achieve sustainability in supply chains, traders and retailers must commit to paying living wages for sustainable production. Since the United Nations Environment Programme recommended using the percentage market share of certified sustainable goods as an indicator of sustainable production, certified goods should meet not only environmental but also poverty and economic benchmarks.

28. **Mr. Badenoch** (World Vision), speaking on behalf of Beyond 2015, said that unprecedented numbers of citizens and civil society organizations had participated in the development of the post-2015 agenda. To meet the ambitious goals set out in that agenda, civil society must also play a major role in its implementation, monitoring and review. The engagement architecture of the Council and the high-level political forum needed changes to facilitate and

institutionalize such participation. In setting up accountability mechanisms, the Council and the forum must ensure that reviews were gender- and age-sensitive and that there was equal participation by all groups, including women, children, young people, persons with disabilities and indigenous people. A bottom-up approach, with subnational reviews feeding upwards to regional and global reviews, would generate ownership at the community level, ensuring implementation at its best.

29. **Ms. Ülker** (Gazeteciler ve Yazarlar Vakfı) said that the action-oriented participation of women in decision-making within civil society organizations was essential for sustainable development. To that end, civil society organizations must start institutionalizing gender equality and including women at all decision-making levels. They should provide training for inexperienced women assuming positions of leadership and help to establish gender-responsive budgeting. They should encourage political parties to institute internal affirmative action policies at all levels. They should conduct research based on gender-disaggregated data in order to promote gender accountability and parity in education. They should support financial and literacy training for women, as well as access to financial services, business monitoring and agribusiness. Lastly, they should work to change cultural attitudes and stereotypes in local communities in order to ensure the full and effective participation of women in sustainable development policies.

30. **Mr. Jourdan** (Global Foundation for Democracy and Development) said that, to re-establish trust and ensure that development initiatives were truly sustainable, the new development agenda should target local productivity; strengthen the social fabric of communities; offer sustainable development education and professional development at the local level and promote community participation in sustainable development decision-making. Innovation and information and communications technology could play a vital role in enhancing public participation, which was crucial to ensuring that development initiatives led to long-term collaborative relationships.

31. **Mr. Karmakar** (International Committee for Peace and Reconciliation) said that despite the very real impact of the MDGs, more than one billion people still lived in extreme poverty, and slavery remained a multibillion dollar industry. A global society where

there was no poverty or hunger, where diseases were controlled, where peace and justice prevailed and where knowledge flowed freely remained a distant goal. However, it was the duty of the international community to reach out to the hungry, the downtrodden and the marginalized.

32. **Ms. Ferrell** (International Council for Education of People with Visual Impairment) said that although her organization was specifically concerned with the goal of equitable quality education for all, it supported all of the sustainable development goals. A number of steps should be taken to ensure access to education for people with disabilities. They included enforcing the Marrakesh Treaty to Facilitate Access to Published Works for Persons Who Are Blind, Visually Impaired, or Otherwise Print Disabled, distributing technology and assisted devices that supported instruction; providing training in the alternative skills for parents, teachers, rehabilitation workers and others involved in the education of visually impaired children and youth; educating the public to see persons with disabilities as capable people, and disaggregating data on economic and educational indicators to show impacts on persons with disabilities.

33. **Ms. Richards** (International Federation for Family Development) said that, given the crucial role of families in social development, better institutional frameworks were needed to provide support for them. Family policy development had not kept pace with changing norms and expectations or the growing difficulties experienced by families. Moreover, more attention should be given at all levels to the impact of policies on families and to the development, promotion and implementation of family-friendly policies.

34. **Ms. Minard** (International Federation for Home Economics, expressing concern at the slow progress on reducing illiteracy, especially among women and girls, strongly urged Governments to implement local, national and international literacy campaigns and recommended the compilation, publication and dissemination of gender- and age-disaggregated data evaluating the literacy levels of all populations along a continuum. Official definitions of literacy should include financial and digital literacy.

35. **Mr. Parmegiani** (Legião da Boa Vontade) said that to harness the full potential of education as a force for development, it was necessary to guarantee access to quality education for all, give people the knowledge

and skills needed for sustainable lifestyles and replicate evidence-based curricular models that taught universal values, human rights, ecumenical spirituality and fraternal love. Altruism was the cornerstone of sustainable development.

36. **Mr. Weber** (Roundtable on Sustainable Palm Oil) said that the production of palm oil was a cause of deforestation, loss of biodiversity and human rights violations. Yet, as a highly efficient crop, it was one of the few that could lift small farmers out of poverty. Since the Roundtable's inception in 2014, it had certified 20 per cent of global palm oil production as sustainable. To maximize the impact of its scheme, it was looking to move from certifying individual farms to certifying jurisdictions. Its ultimate goal was to link producer jurisdictions with jurisdictions that bought commodities. Its success thus far showed that sustainable commodity round tables could have a real impact on promoting sustainable production.

37. **Ms. Ghods** (Society to Support Children Suffering from Cancer) said that one of the most important developments to arise out of the MDGs had been the empowerment of non-governmental organizations. To attain the sustainable development goals, it was crucial to identify and empower effective non-governmental organizations. The Society to Support Children Suffering from Cancer recommended the establishment of a third-party organization to fulfil that identification function. That organization could also create models for future non-governmental organizations and develop strategic plans for empowering non-governmental organizations to contribute to the attainment of the sustainable development goals.

38. **Ms. Levy** (Sorooptimist International) said that chronic underinvestment in gender equality had exacerbated development limitations. As a prerequisite for achieving full development potential, gender equality should be integrated into all of the sustainable development goals, receive dedicated resources and be considered a critical element of national policy. To prevent dilution of the goals, which could leave women and girls particularly vulnerable, compulsory national, regional and global monitoring, review and accountability mechanisms should be mandated in the outcome document. Non-governmental organizations should be treated as partners with valuable recommendations, not merely "other stakeholders". Their ability to collect data, identify and work with

vulnerable and marginalized groups and improve the legitimacy of development programmes made them indispensable for achieving the sustainable development goals.

39. **Ms. Wallace** (World Federation for Mental Health) said that it was imperative to recognize people with mental illness and psychosocial disabilities and to affirm physical and mental health as a basic human right at the heart of a people-centred approach to sustainable development. She commended the inclusion of mental health in sustainable development goal 3 (Ensure healthy lives and promote well-being for all at all ages) and respectfully requested the Member States to ensure that the goals were accompanied by two indicators suggested by the Sustainable Development Solutions Network: indicator 23, probability of dying between exact ages of 30 and 70 from any cardiovascular disease, cancer, diabetes, chronic respiratory disease or suicide; and indicator 28, proportion of persons with a severe mental disorder, including psychosis, bipolar affective disorder and moderate-to-severe depression.

40. **Mr. Marzotto** (World Jewellery Confederation) said that the Confederation was committed to supporting sustainable environmental practices and development-oriented investment in the jewellery industry. It created opportunities for its members to invest in developing economies, where the jewellery industry was often a major source of employment. In partnership with the United Nations Institute for Training and Research, it had developed and implemented a corporate social responsibility programme to educate the diamond, gemstone and jewellery industry about the principles of corporate social responsibility and their implementation. It had also established an education foundation to promote corporate social responsibility throughout the industry.

41. **Mr. Pérez Rulfo Torres** (Corporativa de Fundaciones) said that Mexican civil society organizations had led remarkable and successful efforts to promote the participation of citizens and non-State actors in the post-2015 development agenda process. He called on all stakeholders to view civil society organizations as not only active participants in that process but also partners in the implementation, monitoring and follow-up of the sustainable development goals. Local governments and civil society organizations would play an active role in translating the goals into national development

activities and developing the decentralized approaches required for programme ownership, bottom-up actions, effectiveness and accountability.

42. Because of their ability to contribute material and financial resources, leadership and human capital and to facilitate political accountability and the participation of non-State actors, civil society organizations — especially those from the South — should be better represented in decision-making and follow-up at the global, regional and national levels. His organization appreciated the open and democratic nature of the high-level political forum and the post-2015 agenda process, and the efforts of the United Nations to include civil society organizations in it, in particular through the Open Working Group on Sustainable Development, which it hoped would work with other social actors to place greater emphasis on marginalized groups in the sustainable development goals.

The meeting rose at 5.30 p.m.
