### Security Council Committee established pursuant to resolution 1540 (2004)

#### **Letter dated 13 March 2008 from the Permanent Representative of Andorra to the United Nations addressed to the Chairman of the Committee**

I have the honour to transmit to you herewith the report submitted by the Principality of Andorra in addition to the matrix, duly completed in order to facilitate consideration of the report (see annex).

The Government of Andorra is at the disposal of the Committee should it require any further information on the subject.

I should be grateful if you would circulate this letter and the attached documents to the members of the Security Council Committee established pursuant to resolution 1540 (2004).

(Signed) Carles **Font-Rossell**  
Ambassador  
Permanent Representative

## **Annex to the letter dated 13 March 2008 from the Permanent Representative of Andorra to the United Nations addressed to the Chairman of the Committee**

### **General remarks**

The Government of the Principality of Andorra thanks the Committee established pursuant to Security Council resolution 1540 (2004) for its letter dated 17 October 2007 and has the honour to submit further information on the implementation of Security Council resolution 1540 (2004). The present report was drafted on the basis of information provided by the Ministry of Justice and Internal Affairs, the Ministry of Foreign Affairs, Andorran Customs and the Department of Industry and Transport within the Ministry of Agriculture and Economic Affairs.

It is important to remind the Committee that Andorra has no army and possesses no weapons of mass destruction of any kind, whether biological, chemical or nuclear. Moreover, it has never allowed any activity or industry related to the utilization of nuclear, chemical or biological products to be developed on its territory. Andorra does not produce, develop, market, purchase, possess, utilize or have any stockpiles of chemical, biological or nuclear arms or means of delivery for such weapons or even any of these products. It does not possess old chemical, biological or nuclear weapons.

The Principality of Andorra has committed itself to the adoption of laws and regulations which seek to prevent the establishment of industries related to the utilization of nuclear, chemical or biological products in Andorra and punish any violation of the relevant national and international standards. The treaties, laws and procedures which Andorra has adopted provide evidence of this desire.

### **International treaties and conventions**

With respect to international conventions and treaties, Andorra continues to work for the adoption of key international instruments and has made significant progress towards this end since 2005, when the previous report was submitted to the Committee established pursuant to resolution 1540 (2004) (S/AC.44/2004/(02)/19/Add.1). In practical terms, having signed the Comprehensive Nuclear-Test-Ban Treaty on 24 September 1996, Andorra ratified it in 2006. In the same year, it adopted the Convention on the Physical Protection of Nuclear Material. With respect to nuclear weapons, Andorra has not yet ratified the Treaty on the Non-Proliferation of Nuclear Weapons or the safeguards agreements of the International Atomic Energy Agency (IAEA). These instruments are currently being studied.

### **Paragraph 2 of the resolution**

#### **Question 6: Transport of biological, chemical and nuclear weapons**

The matrix elaborated by the Committee shows that the information provided by Andorra on the transport of biological, nuclear and chemical weapons in the first two reports was scant. It should be taken into account, first of all, that it is only possible to gain access to Andorra by road. Therefore, all products entering the country arrive either from Spain or from France. Consequently, carriers are obliged to comply with the security, monitoring and licensing measures of Andorra's

neighbours when transporting the materials covered by resolution 1540 (2004), whether biological, chemical or nuclear.

Moreover, Andorra applies the European Agreement concerning the International Carriage of Dangerous Goods by Road. Although Andorra has not ratified the Agreement, the Andorran Highway Code of 1999 states that it is applicable nationwide:

“199.1. The transport by road of dangerous goods is regulated by the present article; without prejudice to the provisions of the present Code, the European Agreement concerning the International Carriage of Dangerous Goods by Road that was adopted in Geneva on 30 September 1957, supplemented by subsequent decisions and reformulated in the text of 1 January 1995 and by the relevant supplementary regulations, shall be applicable.”

The Andorran Highway Code adds that all vehicles to be used for the public or private transport of inflammable or dangerous materials, as well as authorized vehicles which may be used for this purpose, must respect the specific standards applicable in each case. Offices of the appropriate department may, at any time, verify and monitor the application of these standards (Highway Code, art. 199.2).

The Andorran legal system establishes criminal and administrative penalties for crimes involving the transport of sensitive materials, chemical and biological weapons and radioactive materials.

At the administrative level, the Highway Code of Andorra establishes penalties such as those set out in its articles 210 to 212.

With respect to criminal law, the Penal Code of 2005 is most specific on the subject of chemical and biological weapons. Its article 266 on the trafficking and stockpiling of chemical or biological weapons stipulates that: “The production, development, marketing, possession, transfer or stockpiling of chemical or biological weapons or related munitions shall be punished by imprisonment of from six to twelve years”. The same article adds that “Marketing shall include acquisition as well as sale, import or export”. With respect to nuclear weapons, there is no specific article in the Penal Code on crimes of transporting nuclear weapons as such weapons have never existed in Andorra. However, the Penal Code does take into account possible crimes of transporting nuclear or radioactive materials in its article 254 (articles 253 to 258 deal with radioactive nuclear materials):

“Article 254 Illicit transport and stockpiling

“Any person who, without due authorization, imports, exports, transports or stockpiles nuclear material or radioactive products that could endanger human life or health shall be punished by imprisonment of from three to eight years.

“Any attempt to commit such an offence shall also be punishable.”

## **Question 11**

The Government of Andorra wishes to correct the information provided in previous reports in relation to question 11 of the matrix with reference to paragraph 2 of resolution 1540 (2004). Since the introduction of the new Penal Code of Andorra in 2005, article 336.2 no longer deals with the crime of financing the activities

covered by the resolution. At present, the law applicable to financing offences is the 2001 Act on International Cooperation in Criminal Matters and Prevention of the Laundering of Money or Securities Constituting the Proceeds of International Crime.

**Other issues under paragraph 2 on nuclear weapons**

- Articles 253 to 258 of the Andorran Penal Code of 2005 deal with crimes relating to nuclear power and serious damage.

“Article 253 Illicit possession

“Whosoever by any means whatsoever is in illicit possession of nuclear material or radioactive products that could endanger human life or health shall be punished by imprisonment of from one to five years.

“If the nuclear material or radioactive products have been stolen by means of violence or intimidation, or through an organized group, a penalty of imprisonment of from three to eight years shall be imposed.

“Article 254 Illicit transport and stockpiling

“Any person who without due authorization imports, exports, transports or stockpiles nuclear material or radioactive products that could endanger human life or health shall be punished by imprisonment of from three to eight years.

“Any attempt to commit such an offence shall also be punishable.

“Article 255 Exposure to radiation

“Whosoever illicitly exposes a person to ionizing radiation in such a manner as to endanger his life or health shall be punished by imprisonment of from five to ten years and disqualification from practising his profession or occupying his post for up to twelve years.

“Any attempt to commit such an offence shall also be punishable.

“Article 256 Disruption of establishments, installations or services

“Whosoever disrupts the functioning of an establishment, installation or service where nuclear material or radioactive products are used in such a manner as to endanger human life or health shall be punished by imprisonment of from one to five years.

“Any attempt to commit such an offence shall also be punishable.

“Article 257 Loss through negligence

“Whosoever through negligence has allowed the removal or loss of nuclear material or radioactive products that could endanger human life or health shall be punished by imprisonment or a fine of up to 60,000 euros.

“Article 258 Emission of radiation through negligence

“Whosoever through negligence has permitted the emission of ionizing radiation that could endanger human life or health shall be punished by imprisonment or a fine of up to 60,000 euros.”

**Paragraphs 3 (a) and (b) Account for/secure/physically protect****Biological weapons and related materials**

- Questions 2 to 9: The Industrial Safety and Quality Act of 22 June 2000 is applicable.
- Question 1: Not applicable, as there is no production in Andorra.
- Questions 13 to 15: Not applicable, as there is no production or genetic engineering.

**Chemical weapons and related materials**

- Question 1: Not applicable, as there is no production.
- Questions 2 to 5: The Industrial Safety and Quality Act of 22 June 2000 is applicable.
- Question 13: There are no reliability checks as there is no production.
- Question 17: Not applicable, as there are no old chemical weapons.

**Nuclear weapons and related materials**

- Question 1: Not applicable, as there is no production.
- Questions 2 to 5: Industrial Safety and Quality Act of 22 June 2000.
- Question 13: Not applicable. There are no reliability checks as there is no production.
- Question 14: Industrial Safety and Quality Act of 22 June 2000.
- Question 15: The national regulatory authority is the Department of Industry and Transport within the Ministry of Agriculture and Economic Affairs.
- Questions 17 and 18: The IAEA Code of Conduct on the Safety and Security of Radioactive Sources and the IAEA Illicit Trafficking Database are not applicable in Andorra. However, the departments concerned have established regulations and procedures.

**Paragraphs 3 (c) and (d)**

With regard to border control, in 2006 Andorra adopted the International Convention on the Harmonized Commodity Description and Coding System, which was already being applied. Together with the risk analyses and statistics prepared by the Customs Department, the Harmonized System has contributed to the establishment of a targeted commodities monitoring mechanism for materials covered by resolution 1540 (2004). Border control consists of exhaustive physical and/or documentary checks of this type of material by customs authorities.

These materials are not monitored only at border posts. Andorran customs authorities also conduct ex post facto controls, as well as end-user controls in warehouses (question 17 of the matrix).

With regard to explosive materials, authorization is required in order to import such materials and is obtained from the Ministry of Agriculture and Economic Affairs, under the supervision of the Customs Department. Moreover, when

detonators or explosives are imported, the Police Service is responsible for accompanying the transport vehicle from the Andorran border to the nation's only munitions warehouse. Subsequent movements of these goods are supervised by the police, who may conduct on-site checks at any time.

The Andorran Customs Department keeps full lists of all imports and exports and is responsible for updating these lists (questions 13 and 14 of the matrix).

It should be noted that the Principality of Andorra is currently drafting legislation governing the export of dual-use elements, which will be identical to the European standards in this regard.

With reference to question 1 of the matrix, since 2004 the Customs Code of Andorra has superseded the Customs Evasion Act of 4 March 1999 cited on pages 4 and 5 of the previous report.

Question 20 of the matrix: With regard to the control of goods in transit, decision 1/2004 of the EC-Andorra Joint Committee established by the agreement between the Principality of Andorra and the European Economic Community stipulates that the Community authorizes the extension to Andorra of the common communication network/common systems interface (CCN/CSI) adopted in Brussels on 29 April 2004. This allows the New Computerised Transit System (NCTS/NSTI), a customs procedure applicable to transit documents which permits European Union and common economic area countries to share information and to trace all goods in transit, to be utilized in Andorra.

**Paragraphs 6, 7 and 8 (d) Control lists, assistance, information**

- Question 1: Control lists: The Andorran Customs Department keeps full lists of all imports and exports.
- Question 2: There are no other control lists.
- Questions 3 and 4: The Government does not offer assistance and has no knowledge of any request for assistance.
- Question 5: The Government has no assistance programmes in place.
- Questions 6 and 7: There is no information for industry or for the public.
